

Test Plan Document

Table content

1. Introduction
2. Test items
3. Features to be tested
4. Features not to be tested
5. Test Environment
6. Tools
7. Test schedule
8. Test responsibility
9. Test approach / strategies
10. Defect reporting procedure
11. Entry exit criteria of STLC phases
12. Test completion criteria
13. Risk and mitigation
14. Approvals
15. Test deliverables

These are all the activities which we are going to perform during testing

1. Introduction:

The test plan is for the E-Commerce Application OpenCart, version 1.0. The objective of the testing is to ensure that the application meets the requirements and is free of defects.

This document serves as high level test planning document with details on the scope of the project, test strategy, test schedule, resource requirements and test deliverable.

2. Test Items:

E commerce Application: OpenCart.

3. Feature to be tested

- Register
- Login and Logout
- Forgot password
- Search
- Product Compare
- Product Display Page
- Add to cart
- Wishlist
- Shopping Cart
- Currencies
- Home Page
- Checkout Page
- My Account Page
- Order History Page
- Downloads Page
- Contact Us Page
- Menu Options
- Footer Options
- Category Pages

As per our understanding, we believe that above functional areas need to be Tested

4. Features not to be tested:

- Features not mentioned in the section 3, “Features to be tested” will not be tested.
- Payment Gateway will be tested.
- Automation testing is not in scope.

5. Test Environment:

- Operating system: Windows 10 → Bases platform
- Browser: Google, Chrome, Edge, Firefox.

6. Tools:

Following tools will be used in the project.

- Word and Excel document
- Bug tracking sheet

7. Test Schedule:

Test Planning: Start Date(dd-mm-yyyy) – End Date (dd-mm-yyyy)

Test Case Development: Start Date(dd-mm-yyyy) – End Date (dd-mm-yyyy)

Test Execution: Start Date(dd-mm-yyyy) – End Date (dd-mm-yyyy)

Test Closure: Date

8. Test Responsibilities:

Name	Role	Responsibilities
Mr.	(Test Manager)	Escalations
Mr.	(Test Lead)	1. Create test plan and get the client signoffs. 2. Interact with the application, create and execute the test cases. 3. Report defects. 4. Coordinate the test execution verify. Verify validity of the defects being reported. 5. Submit daily issue updates and summary defect report to the client. 6. Attend any meeting with client.
Mr.	Senior Test Engineer	✓ Interact with the application ✓ Create and execute the test cases ✓ Report Defects
Mr.	Test Engineer	✓ Interact with the Application ✓ Execute the test cases ✓ Report Defect
Mr.	Developer	✓ Bug Fixing and providing support during testing
	Server Admin	✓ Responsible for managing the test environment

9. Test Approach/Strategy

Manual testing will be used to test all the features/functionality of the OpenCart application. As a part of functional testing, following approach will be followed.

Step 1. Creation of the test scenarios and test cases for the different features in the scope
(Refer section 3. Feature to be tested)

We will apply several test design techniques while creating Test Cases

- Equivalence Class Partition
- Boundary value analysis
- Decision table testing
- State transition testing
- Use case testing

We also use our expertise in creating test cases by applying the below.

Step 2. Our Testing process, when we get an application for Testing

- ✓ Firstly, we will perform smoke testing to check whether the different and important functionalities of the application are working.
- ✓ We reject the build, if the Smoke testing fails and will wait for the stable build before performing in dept testing of the application functionalities.
- ✓ Once we receive a stable build, which passes Smoke testing, we perform in depth in testing using the test cases created.
- ✓ Multiple test resources will be testing the same application on multiple supported environments simultaneously.
- ✓ We then report the bug in the bug tracking tool and send developer project Management the defect found on that day in a status end of the day email.

✓ As part of the testing, we will perform the below types of Testing.

- Smoke testing and sanity testing
- Regression Testing and retesting
- Usability Testing, Functionality and UI Testing

Step 3. We will follow the below best practices to make our testing better.

- Context driven testing – we will be performing testing as per the context of the given application
- Shift left testing – we will start testing from the beginning stages of the development itself, instead of waiting from the stable build.
- Exploratory testing – Using our expertise we will perform exploratory testing, apart from the normal execution of the test cases.

10. Defect Reporting Procedure:

During the test execution-

- Any deviation from the expected behavior/result by the application will be noted. If it can't be reported as a defect, it would be reported as an observation/issue or posted as a question.
- Any usability issues will also be reported.
- After discovery of a defect, it will be retested to verify reproducibility of the defect.
- Screenshots with steps to reproduce are documented.
- Every day, at the end of the test execution, defect encountered will be sent along with the observation.

Note:

We will document the defect in Excel

Test scenarios and test cases will be documented in an excel document.

11. Entry and exit criteria of Software test life cycle (STLC) phases:

STLC Phase	Entry Criteria	Exit
Requirement Analysis	Once the testing team receives the Requirement Document or details about the project	List of Requirement are explored and understood by the Testing team ALL DOUBT ARE CLEARED
Test Planning	Testable Requirements derived/taken out from the Requirement document or the project details DOUBTS ARE CLEARED	Test plan document signed off by the client
Test Design	Test plan document signed off by the client	Test scenarios and Test cases documented are signed-off by the client
Test Execution	Test Scenarios and Test cases documents are signed off by the client APPLICATION IS READY FOR TESTING	Test case report and defect report are ready
Test Closure	Test Case report and Defect reports are ready	Test Closure report

12. Test Completion Criteria:

- All the identified defects must be fixed and verified
- All the test cases must be executed and passes
- All the test deliverables must be completed and submitted
- Performance test should pass the threshold limit

13. Risk and Mitigations:

The following are the list of risks possible and the way to mitigate them.

1. **Risk:** Non-Availability of a resource.

Mitigation: Plan for backup resource.

2. **Risk:** Build URL is not working.

Mitigation: Resources will work on other tasks.

14. Approvals

Following documents need client approval

- Test Plan
- Test Scenarios
- Test Cases
- Reports

Testing will only continue to the next step once these approvals are done.

15. Test Deliverables:

- Test cases
- Test reports
- Defect reports
